# CHIROPRACTIC PROGRAM

Presented by Piet Seru DC, PT and colleagues who are experts in the Sanrocco Method: Ghiretti Giacomo DC, Kapsoulis Alessandro DC & Stockelynck Pieter DC (AECC graduates)

## 1. NEUROLOGY ON RECEPTORS, SUBLUXATION AND PAIN

## 2. CHIROPRACTIC ANAMNESIS

When, how, and why to accept or refuse a patient using psychosocial/cognitive research and Neuro-Linguistic Programming to communicate with the patient as well as the art of creating enthusiastic life-time patients.

## 3. POSTURAL ANALYSIS BEHIND THE PLUMB LINE

Lateral and antero-posterior postural analysis  
The pelvic categories

## 4. STATIC AND DYNAMIC PALPATION

Seated, supine and prone and what the findings mean.

## 5. PREDICTABLE RECURRENT PALPATORY PAIN PATTERNS

(from feet to occiput)

Normal patterns as well as exceptions and their meaning. It will not only allow you to do a unique chiropractic visit, independent of the technique you use, but also to make the patient feel the differences before and after the adjustment. The nice thing about the predictable pain patterns is that it convinces the patient (especially the kinesthetic ones) that you understood their problem. It will not only help you to avoid mistakes but also to show more confidence. This part alone is already worth the whole seminar for chiropractors with a high volume practice.

## 6. SHORT LEG

Difference prone-supine and anatomical short legs (heel lifts)

## 7. PRIORITY SYSTEM:

### a. *Dural Torque Tension*

Probably the most important key to resolve chronic problems, generalized tiredness without evident reasons, malaise, almost all cases of fibromyalgia, pain all over after giving birth and most whiplash injuries.

### b. Occiput lift – Anterior atlas

Not only important in fixing unexplained knee or low back pain, but many times crucial in fixing symptoms of what medicine attributes at a stenosis of the lumbar spine.

### c. SOT Cat. I

Complete basic procedure and how to accelerate the basic procedure of blocking in Cat.I.

### d. SOT Cat.III

Different treatment options between medial and lateral disc herniation. (how to fix a patient with a herniated disc in 4 to 5 visits and different approaches for acute and/or chronic disc problems).

**Please not that the seminar will be taught in English and all of the notes will be in English as well. We also invite you to bring your portable tables .**
